Assignment 1029 (due 1103) Feedback

Note that, as a condition for the due date extension, you were still expected to commit something by 1029. This will factor into your *4f* proficiency.

Ed Seim *SirSeim / sirseim@gmail.com*

Notes while running (asterisks indicate major observations):

- *** Hmmm, OK…so I login and I see some of my metadata. I don't see much else…"Profile" and "Subscriptions" both tell me to contact @SirSeim to implement it. I need to DM that guy… (*3b*, *4a*)

- That said, you do have a nice responsive overall layout idea going on here. Very inviting, like a blank piece of paper! **:)** +(*3a*, *4d*)

- The info that I *do* see is there but somewhat plainly rendered. Some typography or layout would have been nice. I mean, if you are stuck on the other functions anyway, may as well spruce up the parts that do work, right? (*3a*, *4d*)

Code review:

1. Thank you for using spaces to indent all of your code! +(*4c*)

2. Keep your code lines within a finite maximum; 120 characters max per line is typical these days. You can linebreak HTML tags between attributes. (*4c*)

3. You have a lingering copy-pasted identifier here ("`bs-example-navbar-collapse-1`") I know it does not externally matter, but it does degrade trust to see an unaddressed copy-paste in the source. (*4b*, *4c*)

4. This comment isn't necessary. The very next line(s) of code pretty much say the same thing. (*4c*)

5. Why not `container` too? That's how Bootstrap wants you to do it. (*3a*, *4d*)

6. This is where I think you should have gone for greater sophistication in presenting your results. (*3a*, *4d*)

7. Here too, to a lesser degree. (*3a*, *4d*)

8. Yes, this file is so clean, I'll nitpick on that missing space **:-P** (*4c*)

9. For function definitions, place a space between `function` and the argument parenthetical. Think of it as a function statement, but without the name in between…there's still a space there, right? (*4c*)

10. Unused code should be deleted, not commented out. Use version control if you don't want to lose it permanently. (*4c*)

11. Unless adjacent to same-sided parentheses, have a space before and after braces. (*4c*)

12. The line continuations should be indented inward one level. (*4c*)

13. Concatenated HTML code is functional, but not always the easiest to maintain. Look into a combination of jQuery's `clone`, `find`, and `text` methods to give your code more structure. (*4b*, *4d*)

14. Space after `if` (and most other reserved words) please. (*4c*)

15. This is a global variable! Noooooooo… (*4b*)

16. Surround binary operators with spaces for readability. (*4c*)

17. This *might* be necessary based on what the Twitch API requires, but I will say that it raises a red flag for me. At the very least, it is probably best to explain this choice, because in general anything short of libraries or predetermined access points in the top-level scope is not a good practice. (*4b*)

18. Some nice page state transition code here; very systematic and thorough. +(*3b*, *4a*)

Assignment 1029 (due 1103) Feedback

Note that, as a condition for the due date extension, you were still expected to commit something by 1029. This will factor into your *4f* proficiency.

19. OK, this looks like "next step" code and thus makes a smaller but similar case for being allowed to let commented code sit there. Then again for a sufficiently experienced developer, this can also be done on a distinct branch anyway. (*4c*, *4e*)

3a — **/** …You got a good overall concept here, but are tripped up by incomplete functionality.

3b — **/** …Event handling also looks to be on good footing, but still just preliminary.

4a — **/** …Presumably the reason for this is clear too…

4b — **|** …Dat global variable doe. Plus a few other things. And also that the overall program is still somewhat thin in terms of what it does.

4c — **|** …Overall pretty clean, with just a handful of hiccups.

4d — **|** …Good job with the Bootstrap business, but need to get in deeper with that Twitch API.

4e — Decent commit frequency there, spread over a few days. Messages are decently descriptive. (**+**)

4f — Started *on* 1029 (good thing I made you commit on that day), submitted on time. (**+**)
